

## CS 470 Module Five Assignment Two Guidelines and Rubric

### Overview

In this assignment, you will create Lambdas to execute the code to access the database and perform all of the CRUD functions.

### Directions

Create and execute the Lambdas to access the database by following the Module Five Assignment Two Guide along with the Module Five Source Code ZIP file linked in the Supporting Materials section below.

Specifically, you must address the following rubric criteria:

- Create five Lambdas:
  - TableScan
  - GetSingleRecord
  - UpsertQuestion
  - UpsertAnswer
  - DeleteRecord
- Create a table-level security policy allowing Lambdas to access the tables before you test.
- Create a Lambda-level security policy attaching to each of the Lambdas you have created.
- Perform 11 tests to prove that the Lambdas work against each database for each function. Provide evidence of each test.

### What to Submit

Submit the following six screenshots to Brightspace to show the successful completion of your work.

1. Three test runs for Part One: QuestionWithoutFilter, QuestionWithFilter, and AnswerWithoutFilter
2. Two test runs for Part Two: TestGetQuestion and TestGetAnswer
3. The directory structure and index.js file in the Lambda window for UpsertQuestion and UpsertAnswer
  - a. See Part Three, step 8 in the guide.
4. Two test runs for Part Three: TestInsertQuestion and TestInsertAnswer
5. Two test runs for Part Four: TestDeleteQuestion and TestDeleteAnswer
6. JSON policy:

- a. Click on the **Permissions** tab on any of the Lambdas.
- b. Click the role name.
- c. Click the policy name.
- d. Take the screenshot.

## Supporting Materials

The following resources may help support your work on the assignment:

Resource: [Module Five Assignment Two Guide](#)

This guide supplies specific instructions for the assignment.

Resource: [Module Five Source Code](#)

This ZIP file contains the course code you need to complete the assignment.

### Module Five Assignment Two Rubric

| Criteria                            | Meets Expectations (100%)                                                                                                                              | Partially Meets Expectations (75%)                                                                                                                                                                                           | Does Not Meet Expectations (0%) | Value |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|-------|
| <b>Lambdas</b>                      | Creates five Lambdas: TableScan, GetSingleRecord, UpsertQuestion, UpsertAnswer, and DeleteRecord                                                       | Shows progress toward meeting expectations, but with errors or omissions; areas for improvement may include syntactical errors or problems with the database created in Part One, or uploading the wrong Lambdas or ZIP file | Does not attempt criterion      | 25    |
| <b>Table-Level Security Policy</b>  | Creates a table-level security policy that allows Lambda to access both tables in the database, specifically only the six functions for the two tables | Shows progress toward meeting expectations, but with errors or omissions; areas for improvement may include missing one of the six functions, adding other functions, or syntax errors inside the JSON                       | Does not attempt criterion      | 25    |
| <b>Lambda-Level Security Policy</b> | Attaches the new custom security policy to each Lambda                                                                                                 | Shows progress toward meeting expectations, but with errors or omissions; areas for improvement may include forgetting to assign to all given Lambdas                                                                        | Does not attempt criterion      | 25    |

| Criteria | Meets Expectations (100%)                                                                                           | Partially Meets Expectations (75%)                                                                                                          | Does Not Meet Expectations (0%) | Value |
|----------|---------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|-------|
| Testing  | Provides evidence of eleven tests that prove the Lambdas work against each database table for a particular function | Shows progress toward meeting expectations, but with errors or omissions; areas for improvement may include no new questions or new answers | Does not attempt criterion      | 25    |
| Total:   |                                                                                                                     |                                                                                                                                             |                                 | 100%  |
